

Hitachi ID Bravura Safe is an easy-to-implement enterprise password safe that centrally, consistently, and securely manages decentralized passwords, secrets, and files to protect against cyberattacks.

Hitachi ID Bravura Safe

Studies have shown that each person has to remember an average of 70 to 100 passwords for external services and internal resources including sensitive spreadsheets, websites, knowledge bases, productivity apps, and systems. They also have a range of digital records or secrets to recall like corporate credit cards, ssh keys, certificates, and more.

While many organizations have implemented strong internal password management solutions and combined them with easy-to-use Single Sign-On (SSO) features, IT teams now have another cybersecurity risk: an explosion of unmanaged passwords and secrets outside of the IT enterprise applications powering their identity and access management or privileged access management solutions. How are your employees managing their passwords and secrets?

Best case, this gap has forced employees to use unmanaged third-party solutions to store and manage their passwords and secrets, or worse stash them in chat messages, and on spreadsheets, or re-use primary company passwords to make them easier to remember. Weak and insecure passwords are an easy target and are often a hacker's first entry point into your organization. How safe are your employees' decentralized passwords?

Ensure Decentralized Passwords Are Not A Loose Thread

Hitachi ID Bravura Safe is an enterprise password safe with a robust central security manager that complements core password management solutions that organizations already use. It leverages two decades of Hitachi ID's enterprise cybersecurity solutions to provide password storage that centrally controls, manages, and protects decentralized passwords, secrets, and files. Employees can securely send time-bound passwords for new accounts, encryption keys for files, or entire files without them being leaked or intercepted, and with only one password to their Hitachi ID Bravura Safe to remember.

Simplify password storage

Save all of your passwords in one safe place with one password to remember and access them across all of your trusted devices.

Auto-generate strong passwords

Employee passwords are automatically restructured into strong passwords so all decentralized passwords that leave the IT security boundary are strong and without semblance to any employee password used within the enterprise.

Central password management

A centralized management console to the password repository provides IT security with full visibility (without values of passwords) and all capabilities that enterprise security professionals are familiar with to manage these decentralized passwords.

Encrypted repository

Centrally store and encrypt all decentralized passwords, secrets, files in a high security database for easier management and better visibility.

Safely send sensitive content

Safely send sensitive text or files to other employees or individuals outside the company sharing only an encrypted URL to access and download.

Consumer-grade User Interface

Create and manage passwords using an easy-to-use consumer-grade interface so that employees can easily create and manage these passwords without heavy IT support.

Improve employee security hygiene

Help employees make better decisions by alerting them to the risks and informing them when they are using weak, compromised, or synchronized passwords to improve password hygiene.

Flexible deployment options

Hitachi ID Bravura Safe can be implemented in a SaaS public cloud.

Fast deployment

Hitachi ID Bravura Safe can be implemented in minutes with a fast, IT-friendly "load and go" architecture with employees easily onboarded in a self-service process.

Compatible with the Hitachi ID Bravura Security Fabric

Hitachi ID Bravura Safe operates as a standalone solution and can be used with the Hitachi ID Bravura Pass, Bravura Identity, and Bravura Privilege solutions.
